Sink

DISASSEMBLING OF TOP:

-) Remove the two screws under the front edge.
-) Pull the Top towards the side of the operator by roughly two cm, to release it from the rear fixing.
-) Once it is free of the rear fixing and from the front edge, lift the top at a right angle.
-) To prevent accidentally moving the sink after installation, we recommend fixing it to the wall using the relevant holes in the rear and the anchor bolts supplied with the set of sink accessories.
-) In the versions "on legs", the rear connecting cross member can be removed after the sink has been fixed to the wall if you wish, although we do recommend always using this cross member.
